Support Desk — decisions and implementation gates

31 October 2026. This register separates explicit user choices from recommendations and unresolved source-PDF policies. It does not require approval to read or revise the design documents.

Confirmed in this conversation

ID	Decision	Consequence
C-01	Recreate as a production application	Real authenticated identities, persistent records, files, jobs and audit
C-02	Full build handoff, using prototype and all local PDFs	Preserve UI, logic, data and permissions with evidence/traceability
C-03	Review conflicting references with the user	No silent source precedence for conflicting behavior
C-04	Match appearance with required fixes	Retain design language; accessible searchable selectors and production feedback permitted
C-05	Manual launch	No customer mail, commerce, warehouse, carrier or payment execution integration assumed
C-06	React/TypeScript + TypeScript API/worker + PostgreSQL	Stack baseline; exact packages/versions pinned during implementation
C-07	AWS is a proposal	No account, region, cost, provisioning or service sizing approved
C-08	Allow self-approval	Eligible manager may decide own/materially edited service, waiver or refund request; retain actor identity/audit; correction still requires its own grant
C-09	Use demo deadlines for testing	Review24h, resolution72h, ordinary next action24h, replacement delivery48h, reminder1h before; elapsed time only; production SLA not approved
C-10	One eligible manager approval remains baseline	No invented second approver or monetary threshold

Open decisions

Recommendations below are proposals, not approved policy. Affected production actions remain disabled or fail with PolicyNotConfigured until the required policy is agreed. Unrelated work may proceed. References use DEV page numbers.

ID	Question and proposed direction	Affected launch gate / owner / source
D-01	What are business-hour calendars, holidays, targets, pause/reopen clocks and allowed backdating? Retain demo values in test only	Production SLA/reminders and retrospective corrections; Head/CM; pp.28,92,96–97
D-02	What are allowed countries/warehouse memberships and cross-country CS mutation rules? Preserve shared reads and legacy operational wildcard until explicit migration	Scoped server writes and production account provisioning; Operations/Super; pp.68–70,92,97–98
D-03	Which staff identity provider, SSO/MFA, invitation verification, recovery evidence, session expiry/revocation and delivery channel? Propose organisational identity/Cognito adapter	Real login/invite/recovery deployment; technical/security owner; pp.7–8,71–73,95
D-04	Actual brand/store/order namespaces, currencies/exponents, order total/tax/shipping/discount caps, earlier refunds/credits and multi-ticket relinking? Keep manual verified evidence; no FX	Live refund eligibility; CS/Finance; pp.51–55,93,96
D-05	Which real migration sources/files/fields/history depth, volume, ownership and cutover? Require masked samples and reconciliation	Source-specific importer and cutover; data owner/CS/Finance; pp.11,18–20,92,97
D-06	Can delegated administrators grant Super or capabilities they lack? Prototype has no ceiling; do not silently ship privileged delegation	Delegated production privilege changes; Super/security; pp.64–67,94–96
D-07	How long is Working now lease, expiry/takeover and draft retention? Proposed test120s lease/30s heartbeat, explicit takeover	Production collaboration and retention; CS/technical; p.8
D-08	How to correct erroneous physical receipt, mistaken final waiver, final provider/payment result or closed dispute? Separate authorised adjustment/event; never overwrite	Final-fact correction UI/API; Logistics/Finance/Head; pp.47,56–57,96
D-09	Dispute intake/provider identifiers, won/lost/withdrawn results, financial effects and reopen? Preserve baseline evidence tracking, do not infer bank effects	New/imported dispute production workflow; Finance; pp.56–57,96
D-10	Catalogue identifier reuse, reference retirement, semantic type extension, capacity label vs structured unit, and country/warehouse archival? Preserve historical IDs/snapshots	Reuse and destructive/meaning-changing master actions; Head/Super; pp.73–84,95–96
D-11	Unified test/archive row policy, sensitive fields, export schemas/expiry/limits, evidence retention/size/types, audit retention/deletion? Propose8 stable JSON-history CSV schemas; no hidden PII	Production bulk data/files/retention; data/security owner; pp.34–39,93,98
D-12	Expected users/records/attachments/peaks, uptime, RPO/RTO, region/residency, monthly budget and deployment provider? Propose modular API+worker; AWS optional	Provisioning, capacity/recovery acceptance; technical/operations; p.10, AWS pp.1–2
D-13	Customer confirmation/nonresponse windows and reviewed closure evidence? Never let nonresponse waive independent obligations	Reviewed closure policy; Head/CM; pp.58–63,93
D-14	Keep Outreach/Purchase Stores reference-only? Proposed yes until operational mapping is specified	Optional new intake/order fields, not basic master CRUD; Head; pp.80–82,94

ID	Question and proposed direction	Affected launch gate / owner / source
D-15	Are partial/substitute/lost outbound shipments or additional replacement attempts launch scope? Proposed baseline one exact shipment per approved scope	Expanded fulfilment; Logistics/Head; pp.44–46,96
D-16	Parcel reference uniqueness namespace and controlled wrong-match reversal? Propose warehouse+reference after source-system review	Production parcel linking/correction; Logistics; pp.50–51
D-17	Idempotency-key retention and amount/provider-reference namespaces? Keep successful business uniqueness independent of short-lived request dedupe	Command replay retention and finance/provider namespace; technical/Finance; pp.9,54,96
D-18	Historical-at-cutoff/event-based analytics needed? Preserve labelled current-created-cohort reports and first-miss task reports initially	Any new historical SLA/CSAT/sentiment/report semantics; Head/management; pp.85–90,93,97

Source differences requiring deliberate treatment

Reference behavior	HLD/LLD treatment	Classification
Tab-local records, role selector, refresh reset and browser timers	Authenticated API, durable store, production identity and scheduler	Required production difference, not a conflict needing reapproval
Native dropdowns	Accessible searchable long-list controls	Explicit DEV production requirement
Receipt cumulative totals	Append-only physical deltas/events with cumulative entry UI	Explicit DEV production requirement
Raw variable columns in six exports	Versioned explicit schemas retaining nested history	Explicit DEV production requirement; final field policy still D-11
End-of-day23:59:59.000 cohort bound	Half-open next-midnight bound includes fractional final second	Explicit DEV production correction
Task-only dispute closure guard	Independent dispute-state check plus task check	Explicit DEV production requirement
Country strings double as warehouse/scope	Stable distinct IDs with legacy wildcard compatibility until D-02	Required normalisation, semantic change gated
Mutable current actor/label strings	Immutable IDs plus historical display snapshots	Required production difference
Reset verified but not sent	Separate real provider delivery states; never infer Sent	Required production difference; provider policy D-03

No additional contradictory live-vs-PDF rule is asserted from navigation-only inspection. Reconcile exact modal/state behavior during implementation UAT and add concrete conflicts here if discovered.
